Product Overview

The **Falcon-S** is a highly integrated, high availability, high performance, and cost-effective Network Termination Unit (NTU).

This product extensively supports the evolving needs for broadband access services delivery, including high throughput, granular SLA enforcement and monitoring, flexible management capabilities, and a high degree of scalability and flexibility to cater for future requirements and technology trends.

The **Falcon-S** primarily addresses the rapidly-expanding market of mobile backhauling and business access applications.

The **Falcon-S**'s unique Dual Hybrid Core architecture (DHC) supports remote Data Plane Upgrades (DPU) to allow modification and addition of packet processing functions that require **full wire speed performance** that cannot be handled in SW.

The **Falcon-S** is also offered in a variant with complete precision timing support based on **Synchronous Ethernet** and **IEEE1588-2008** for LTE mobile backhaul applications.

The **Falcon-S** models are equipped with 4x10/100/1000BaseT (RJ45) user ports, 4xSFP user ports, and 2xSFP PowerLink ports acting as NNIs. The user ports can be used in a flexible manner and can all operate at full wire speed. This leads to a total processing capacity of 20Gbps (non-blocking).

The **Falcon-S** offers advanced Quality of Service (QoS) features including classification and mapping based on layer 1 through layer 4 attributes, rate limiting, and shaping per port, queue, and service.

All MEF defined services (EPL, EVPL, ELAN, etc) can be delivered with the **Falcon-S** series and can further be protected through use of high performance mechanisms, based on G.8031 and G.8032v2, for link, path, and ring resilience.

These features, combined with a highly flexible fault propagation mechanism and unique fast failure detection algorithms yield a comprehensive and sophisticated device that can handle virtually any network topology.

The system implements current OAM standards (802.3ah, 802.1ag, Y.1731) with HW assist as well as proactive measurements and alarming facilities. To complete the OAM toolset, the **Falcon-S** has a built in packet generator and analyzer to implement RFC2544 for quick service turn-up and verification.

A **unique Micro-Burst Detection** (MBD) technology for microsecond granular SLA monitoring is incorporated in the system, helping to detect, alert, and report nearly invisible traffic anomalies, which is essential in highly QoS-sensitive applications, such as financial, healthcare, etc (patent pending).

The **Falcon-S** series is MEF compliant (CE2.0 certified, MEF9, MEF14, MEF20, MEF22)

The **Falcon-S** is housed in a robust 19"/1RU housing that allow the installation of hot swappable redundant AC and/or DC power supplies.

All the above result in a market leading system with small form factor dimensions.
